

Our recommended care for yacht surfaces

Winter work:

1. Wash with the pH-neutral Polish & Protect Shampoo P1.
2. Only if necessary:

"Polish medium" to remove slightly matt areas and fine scratches.

"Polish strong" for heavy oxidation, fading, scratches and very matt surfaces.
Attention: Use only with the polishing machine and polishing sponge medium (white). Polishing machine speed 900 to 1,500 rpm.

Sealing with "Polish Soft" (polishing sponge medium (white)).
Polishing machine speed: 900 rpm.

3. Finally, apply the Polish & Protect "Polymer Sealant" twice with a high-quality, clean microfibre cloth or a suitable cotton cloth. Allow a flash-off time of 30 minutes between the sealing coats. Then polish to a smooth finish with a black polishing sponge (waffle surface) or manually with a cotton cloth. This increases the layer thickness of the protective polymer.

During season:

Care only with water and our Power-Towel, if necessary with Shampoo P1 or "Polish Soft" for heavier soiling. Polish mechanically with Polish Soft and a microfibre cloth, allow to dry and then polish smooth with a cotton cloth. This cleans the surface and at the same time restores the layer thickness of the protective polymer.
