

Shampoo P1

Shampoo P1 cleans and protects the surface of your boat in one step.

After application, the surface gets a new shine and is prepared for further sealing with the Polish & Protect Polymer Sealant (see instructions for use Polymer Sealant).

Instructions for use:

- Mix Shampoo P1 in a ratio of 100ml to 5L of clear water.
- Wash the surface with a fine sponge or soft brush. The surface should then be dried with a clean, high-quality microfibre cloth (optionally cotton cloth).
- Alternatively we recommend: Mix 20ml shampoo P1 with ½L clear water in a spray bottle. Spray the dilution on a small area and wipe with a damp microfibre cloth. Finally, dry the treated surfaces with the specially developed Polish & Protect Power Towel or a clean and dry microfibre cloth.
